**Pairing your system to your new WIFI.**

This is a step by step guide if you are unsure please contact us on 01287 550355

1. Begin by typing in your user code to access the master menu

2. To navigate this menu you use the up, down, left, right and back keys. Navigate your way to change settings and press the right arrow to select.

3. Navigate the comms modules and press right to select.

4. Navigate to wifi settings and press the right key to select.

5. Select the password field and type in your wifi networks password (this is case sensitive)

6. Press the back key until you return to the system settings menu, navigate to WI-FI status and checks and press the right arrow

7. At this point the system will scan for your network, once it displays the list you must navigate to the correct network name and press the 'enter' button at the bottom left of the keypad to connect to your network. You know you have connected when the display changes from connect to disconnect.

8. Once you have connected use the back button to return to the main menu and then select exit menu.

You have completed the guide, if you are still having trouble, you will require an engineer visit, please call us to arrange this to restore the use of your app.
